Summary

Dedicated web developer with an aptitude for following code practices and building successful projects. Possesses 2 years of experience in object-oriented programming and 8 months of experience in building websites through recreating designs. Highly self-motivated, passionate learner with an eye for detail and strong collaboration skills.

Education

B.S. in Computer Science   **2018**
Rutgers, The State University of New Jersey   Newark, NJ

Skills

- **Markup Languages:** HTML, CSS
- **Programming Languages:** Javascript, Java, PHP
- **Frameworks:** JQuery, Bootstrap, SASS, Hyperapp, React, Node, Express
- **Technologies/tools:** Linux, Git, Atom

Experience

React Movie App   **July 2018**
- Configured an Express router that handles HTTP requests made through Axios and returns JSON data sent from MovieDB Api
- Uses state management to display data and build dynamic URLs by passing JSON data as parameters

Dynamic HTML Table   **May 2018**
- Loops over an array of objects to dynamically generate an HTML table and populate cells with data
- Conditional statements are used to apply CSS classes to table rows based on certain property values of the current object.

Wunderapp   **May 2018**
- Created a clean, non-responsive, single-page website based on a Wunderapp redesign found on Dribbble.com
- Built with HTML, SASS, and Vanilla Javascript

IMDb   **February 2018**
- Developed a responsive, single-page website that was inspired by an IMDb redesign
- Built using frameworks such as Bootstrap 4 and Hyperapp

Schedule Manager   **January 2018**
- Developed a responsive website based on a layout found on Dribbble.com
- Created using HTML, CSS, and JQuery.

Whatcha Lookin' App (Castle Ventures)   **September 2017 - December 2017**
- For a senior project, I wrote an android app in which users could accept or deny access to critical data
- Made GET requests to receive Json response data and displayed it using CardView and RecyclerView
- Integrated with Google Firebase Cloud Messaging to maintain a login sessions and receive push notifications
- Implemented real time list filtering, allowing users to sort through requests by names
